Patented Respect

Franklin, a partner at Kilpatrick Townsend & Stockton, along with John Boulder office, expects the patent office will help create a culture for innovation and the law. Landing on the federal government to create regional patent offices will encourage more innovators and companies to locate here, and to become self-perpetuating.

Since the July announcement that Denver would host one of the new regional patent offices, several area law firms have added to their patent attorneys and patent attorneys already here.

A local patent office will be a boon not just for the Denver area but also for the state. The legislation is a win for Colorado, said Mundy Soeter of Faegre Baker Daniels, who will make the region more attractive to foreign companies.

"People think about where they want to open an office, and if they want to open an office in Denver, they'll look at the competition," Soeter said. "People think about where they want to open an office, and if they want to open an office in Denver, they'll look at the competition," Soeter said. "People think about where they want to open an office, and if they want to open an office in Denver, they'll look at the competition," Soeter said.

The recognition is also a win for the state's innovation ecosystem. The state's innovation ecosystem is already a competitive one, says Mundy Soeter of Faegre Baker Daniels, who will make the region more attractive to foreign companies.

PATENTED RESPECT
CONTINUED FROM PAGE 13...

only to practicing patent attorneys, but those who aspire to join their ranks, said Weiser, the CU law school dean. The office will not only be a selling point for prospective students and faculty, but also will give students the opportunity for more hands-on experience.

The law school runs a patent prosecution clinic that gives students real-world experience in handling patent claims, and now that experience will become even richer with the opportunity to interact in person with patent examiners, Weiser said. The patent office will also open up another career path, for students interested in becoming examiners.

The federal law creating the regional patent offices requires they be opened by 2014, but Posthumus has said he’s optimistic that Denver’s will open sooner. The city has already leased space in the Byron G. Rogers Federal Building, across from the federal courthouse. In October, Posthumus and other delegates met with U.S. Patent and Trade Office deputy director Terry Stanek Rea in Denver to discuss the hiring of the branch’s new director. Once that happens, the timeline on opening the office will shorten.

For Posthumus, Franklin and Draper, who put so much effort into landing a local patent office, it can’t happen soon enough.
